

Suresh Pedapudi

DATA ENGINEER

Vancouver, BC | +1 672 971

1261 | suresh.pedapudi1999@gmail.com | linkedin.com/in/sureshpedapudi | github.com/pedapudisuresh

PROFESSIONAL SUMMARY

Data Engineer with 4 years of experience building production-grade distributed data systems and scalable data infrastructure. Proven success maintaining service-level objectives for business-critical pipelines and partnering with product, finance, and compliance stakeholders. Advanced proficiency in Python, SQL, PySpark, dimensional modeling, automated testing, and modern cloud data platforms, with additional strength in machine learning, natural language processing, and predictive modeling.

TECHNICAL SKILLS

Languages	Python, SQL, PySpark, TypeScript, JavaScript, R
Data Engineering	Apache Spark, Kafka, Airflow, dbt, Hadoop, ETL/ELT, dimensional modeling, data transformations, data quality
Cloud & Data	AWS, GCP, Snowflake, BigQuery, SQL Server, MySQL, PostgreSQL, NoSQL
ML & Analytics	Machine learning, predictive modeling, NLP, LLMs, PCA, Tableau, Looker
Platforms	Palantir Foundry/Skywise, Ontology, Workshop, Slate, Contour, Quiver
DevOps & Web	Git, Docker, Kubernetes, Terraform, Jenkins, CI/CD, React, Node.js, Vite, Tailwind CSS

PROFESSIONAL EXPERIENCE

Data Engineer Jan 2025 - Present

TechHands | Part-time: Jan 2025 - Dec 2025 | Full-time: Jan 2026 - Present | Multi-Tenant Data Analytics Platform

- Design and implement dimensional data models within a multi-tenant architecture, optimizing analytical workloads for Snowflake and BigQuery while supporting operational query patterns.
- Automated event-driven ingestion with AWS S3, Glue, and Lambda, reducing data latency by 40% while maintaining strict SLOs for business-critical reporting.
- Integrated automated tests and data-profiling controls into deployment pipelines, supporting 100% data integrity across releases and reducing production failures.
- Orchestrate CI/CD workflows with Docker, Git, and Jenkins in an Agile environment to support reliable production services.

Digital Specialist Engineer | Official Designation Sep 2021 - Jul 2024

Infosys Ltd. | Functional Role: Data Engineer | Client: Airbus, France | Export Control Data Readiness

- Engineered production-grade PySpark and SQL transformation pipelines in Palantir Skywise, reducing processing latency by 30% for large-scale ingestion.
- Unified 50+ disparate sources into a governed Ontology layer, improving data consistency by 25% and supporting enterprise-wide information management.
- Built applications in Workshop and Slate using TypeScript, JavaScript, and HTML5 to automate regulatory reporting for 100+ stakeholders.
- Performed root-cause analysis on pipeline bottlenecks and established technical documentation that reduced onboarding time by 50%.
- Translated complex requirements into 15+ scalable solution designs and served as technical liaison for high-priority analytics initiatives.

SELECTED PROJECTS

Predictive Health Analytics Platform

Langara College | Vietnam Government collaboration

- Developed an end-to-end machine-learning pipeline to predict prostate and lung cancer presence from high-dimensional RNA-sequencing datasets.
- Extracted and preprocessed raw Sequence Read Archive data in FASTQ format using Python and GCP, transforming unstructured inputs into analysis-ready tabular datasets.
- Applied principal component analysis and advanced feature-selection techniques to reduce dimensionality and identify high-value predictive variables.
- Trained and optimized multiple classification algorithms to support robust outcome prediction across diverse genomic profiles.

Full-Stack Nursing Department Application

Langara College

- Developed a full-stack application to replace manual administrative workflows with a centralized digital platform.
- Built the application with React, Vite, and Node.js and designed a responsive, accessible interface using Tailwind CSS.
- Streamlined data retrieval and digitized departmental records to improve workflow efficiency.

EDUCATION

Post-Degree Diploma in Data Analytics

Dec 2025

Langara College | Vancouver, BC

Bachelor's in Computer Science Engineering

Jun 2021

Vignan's Institute of Information Technology

CERTIFICATIONS

- AWS Certified Data Engineer - Associate
- AWS Certified Cloud Practitioner
- Big Data Spark Professional - Infosys
- Programming and Data Structures with Python - NPTEL
- Database Management Systems - NPTEL
- Blockchain Technology - NPTEL
- Blockchain Technology and Smart Contracts - Coursera

CORE STRENGTHS

Critical thinking, risk assessment, decision-making, stakeholder communication, and cross-functional collaboration.
