SUMMARY

Technical Data Engineer with 4 years of experience building production-grade Distributed Data Systems and scalable Data Infrastructure. Proven expertise in maintaining SLOs for business-critical pipelines and partnering with Product and Finance teams to deliver high-throughput Solution Designs. Highly proficient in Python (OOP) and SQL, with a strong focus on Engineering Excellence, automated testing, and modern data stacks (Snowflake/BigQuery).

WORK EXPERIENCE

Data Engineer

January, 2025 – Present

TechHands (Part time)

Project: Multi-Tenant Data Analytics Platform : Built a scalable, reliable data platform to consolidate operational infrastructure data, ensuring high-performance analytics for internal stakeholders.

- **Distributed Systems & Modeling:** Designed and implemented scalable Dimensional Data Models within a multi-tenant architecture, optimizing for both OLAP (Snowflake/BigQuery focus) and OLTP query performance.
- **Pipeline Reliability & SLOs:** Leveraged AWS (S3, Glue, Lambda) to automate event-driven ingestion, reducing data latency by 40% while maintaining strict SLOs for business-critical reporting.
- **Quality Mindset:** Integrated Automated Test Coverage and Data Profiling protocols into the deployment pipeline, ensuring 100% data integrity and reducing production failures.
- **Engineering Excellence:** Orchestrated CI/CD workflows using Docker, Git, and Jenkins within an Agile framework to support seamless production services.

Digital Specialist Engineer(DNA Unit)

September, 2021 – July, 2024

Infosys Ltd.

Data Engineer | Airbus(France)

Project: Export Control Data Readiness [Tangible]Developed a centralized data processing framework to streamline Export Control compliance for Airbus, ensuring cross-functional data availability and integrity.

- **Big Data Transformation:** Engineered production-grade Data Transformation pipelines in Palantir Skywise using PySpark and SQL, reducing processing latency by 30% for large-scale ingestion.
- **Data Modeling & Ontology:** Unified 50+ disparate sources into a single Ontology layer, improving consistency by 25% and supporting enterprise-wide Information Management.
- **Business Intelligence (BI):** Built bespoke applications in Workshop leveraging Typescript for functions on top Objects and Slate (JS/HTML5) to automate regulatory Data Reporting for 100+ stakeholders.
- **Technical Governance:** Performed Root Cause Analysis on pipeline bottlenecks and established documentation that reduced team onboarding time by 50%.
- **Stakeholder Collaboration:** Translated complex requirements into 15+ scalable Solution Designs, acting as a technical liaison for high-priority Business Analytics projects.

TECHNICAL SKILLS

Category

Tools & Technologies

Palantir Foundry	-	Skywise, Slate, Workshop, Ontology, Code Repositories, Code Workbooks, Contour, Quiver,
Data Engineering	-	PySpark, Python, SQL, Spark, Hadoop, Kafka, Flume, ETL/ELT, Data Transformations, Typescript, Airflow, dbt
Analytics & BI	-	Large Language Models (LLMs), NLP, Machine Learning Algorithms, R, Tableau, Looker
Cloud & Databases	-	AWS , GCP, Snowflake, BigQuery, SQL Server, MySQL, PostgreSQL, NoSQL
Full-Stack Web	-	React, Node.js, Vite, Tailwind CSS, JavaScript (ES6+), HTML5, CSS3
Tools & DevOps	-	Git (Version Control), MS Project, Jenkins, Visual Studio, CI/CD, Unix/Windows, Docker, Kubernetes, Terraform

EDUCATION

Post Degree Diploma in Data Analytics - Langara College

- Graduated: December, 2025

Bachelor's in Computer Science Engineering - Vignan's Institute of Information Technology

- Graduated: June, 2021
-

CERTIFICATIONS

- Certified on Programming and Data Structure with Python - Nptel
 - Big Data Spark Professional Certified from Infosys
 - AWS Certified Cloud Practitioner
 - AWS Certified Data Engineer Associate
 - Certified on Database Management System - Nptel
 - Blockchain Technology and Smart Contracts - Coursera
 - Certified on Blockchain Technology - Nptel
-

SOFT SKILLS

- Critical thinking
 - Risk Assessment
 - Decision making
 - Communication
 - Multi-tasking
-

HOBBIES

- BingeWatching Anime
 - Playing Cricket
 - Hanging out with friends
-

NOTABLE PROJECTS

Full-Stack Nursing Department Application | Langara College

Developed a custom full-stack web application to automate administrative workflows for the Nursing Department, replacing manual processes with a centralized digital hub.

- Stack: Engineered using React, Vite, and Node.js for a high-performance, full-stack architecture.
- UI/UX: Designed a responsive and accessible interface using Tailwind CSS.
- Impact: Streamlined data retrieval and digitized sensitive departmental records to improve workflow efficiency.

Predictive Health Analytics Platform | Langara College | Vietnam Gov (Collab)

Developed an end-to-end machine learning pipeline to predict Prostate Cancer & Lung Cancer disease presence from high-dimensional genomic datasets (RNA-seq), transforming raw biological data into structured feature sets.

- Data Engineering: Extracted and preprocessed raw data from the SRA database in FASTQ format, utilizing Python and GCP to transform unstructured inputs into a structured CSV schema.
- Feature Engineering: Applied Principal Component Analysis (PCA) and advanced feature selection methods to reduce dimensionality and identify the most significant predictive variables.
- Model Deployment: Trained and optimized multiple classification algorithms to achieve high accuracy in predicting clinical outcomes, ensuring the model was robust across diverse genomic profiles.
